

PTFE

PTFE machine-tooling

With over fifty years of experience machine-tooling PTFE, we have specialised in manufacturing technical parts: bellows for chemical industry, expansion compensators, o-rings, seals for glassware in fine chemical industry, shaft linings, valves, balls, segments, standardised seals, parts as per customer drawings, die-cut joints, etc.

Our flexibility permits us one item to large series production, being able to customise your parts with colour, given a sample or drawing..

The maximum diameter we can machine tool is 750 mm.

From our technical department we offer our customers our wide knowledge and experience in PTFE part manufacturing, allowing us to assess them in the design of new parts.

Merefsa's machinery includes latest technology machines such as numerical control lathes, CNC, a numerical control mill and a manual control mill.
